Exercici 1

A partir dels documents adjunts (estructura_dades i dades_introduir), importa les dues taules. Mostra les característiques principals de l'esquema creat i explica les diferents taules i variables que existeixen. Assegura't d'incloure un diagrama que il·lustri la relació entre les diferents taules i variables.

L'esquema consta de dues taules anomenades "transaction" i "company".

Les dues taules es relacionen entre elles de 1 a N mitjançant la variable Id de la taula company a la company_id de la taula transaction. Això vol dir que trobarem 1 companyia que pot tenir varies transaccions i varies transaccions poden pertànyer a 1 companyia.

- A la taula "**company**" trobem les següents variables:
 - **Id**: indica el numero de id. Per cada companyia. Cada companyia tindrà un número únic. Es la Primary Key de la taula i es relacion amb la variable company_id de la taula "transaction".
 - **Company_name**: indica el nom de la companyia.
 - **Phone**: telèfon de la companyia.
 - **Email**: conté la direcció de correu electronic de cada companyia.
 - **Country**: mostra la ciutat de la companyia.
 - **Website**: indica la pàgina web de la companyia.
- A la taula "**transaction**" trobem les següents variables:
 - **Id**: indica el número de cada transacció. Cada transacció tindrà un número únic.
 - **Credit_card_id**: indica la identitat de cada targeta de crèdit.
 - **Company_id**: indica el número de la companyia. Es la Foreign Key de la taula i es relaciona amb la PK de la taula "company" amb la variable Id.

- **User_id:** indica el número d'identificació de l'usuari.
- **Lat:** indica la latitud del lloc on es va realitzar la transacció.
- **Longitude:** indica la longitud del lloc on es va realitzar la transacció.
- **Timestamp:** indica el temps concret amb dia, mes, any i hora (amb minuts i segons) de la transacció.
- **Amount:** la quantitat del preu de la transacció.
- **Declined:** indica si la transacció ha sigut declinada o no.
